

Compact Oil Resistant/Oil Proof Type Photoelectric Sensor NEW

■ Features

- Stronger in the environment with full of cutting fluid or lubricating oil (optimized for automobile and machine tool industry)
BJR (oil resistant type): Special coating prevents penetration of oil into the product.
BJR-F (oil proof type): Even if oil penetrates into the product, it operates normally.
- Long sensing distance with lens of high performance
- Through-beam type: 15m, Diffuse reflective type: 1m,
Polarized retroreflective type: 3m (MS-2S)
- M.S.R. (Mirror Surface Rejection) function (retroreflective type)
- Compact size: W20 × H32 × L11mm
- Light ON/Dark ON operation mode switch
- Sensitivity adjuster
- Built-in reverse polarity protection circuit and output short overcurrent protection circuit
- Mutual interference prevention function (except through-beam type)
- Excellent noise immunity and minimal influence from ambient light
- IP67 protection structure (IEC standard)
BJR (oil resistant type): IP67G oil resistance protection structure (JEM standard)
BJR-F (oil proof type): IP67F oil proof protection structure (JEM standard)

※The model name with '-C' is connector type, and with '-W' is cable connector type.
※MST-□ is sold separately.

⚠ Please read "Safety Considerations" in instruction manual before using.

※1: The sensing distance is specified with using the MS-2S reflector. The distance between the sensor and the reflector should be set over 0.1m. When using reflective tapes, the reflectivity will vary by the size of the tape. Please refer to the catalog or web site.

※2: Non-glossy white paper 300×300mm.

※3: Non-glossy white paper 100×100mm.

※4: Alphabet represents protection structure for oil resistance/oil proof which is defined according to the JEM.

G: Oil (drop or dust) from any direction never penetrate into the product.

F: The product is not affected by oil (drop or dust) from any direction.

※5: M8 connector cable is sold separately. (AWG26, core diameter: 0.1mm, number of cores: 20, insulator out diameter: Ø1mm)

※6: M12 connector cable is sold separately. (AWG22, core diameter: 0.08mm, number of cores: 60, insulator out diameter: Ø1.65mm)

※7: Although some of the cable connector type products can have color difference in the connector part due to the coating, it does not affect operation and performance.

※8: Cable type and cable connector type includes bracket A and connector type includes bracket B.

※9: The weight includes packaging. The weight in parenthesis is for unit only.

※The temperature or humidity mentioned in Environment indicates a non freezing or condensation.

■ Oil Resistance/Oil Proof Test

For IP67G, IP67F protection structure, we conducted reliability test on the oil in the following table, and got a result of pass.

When reviewing the oil to be used, refer to the following table.

Oil type	JIS standard	Oil name	Kinetic viscosity (mm ² /s, 40°C)	PH
Lubricating oil	—	Velocite Oil No.3	2	—
Water-insoluble cutting fluid	2-5	Tectyl Cut 527	27	—
Water-soluble cutting fluid	—	Tectyl Cool 263C	—	9.5 (10% Solution)

● Result of dropping test for 240 hours with the above oil

- BJR (oil resistant type): Special coating prevents penetration of oil into the product. It obtains IP67G (JEM standard) protection structure of enhanced oil resistance.

- BJR-F (oil proof type): Even if oil penetrates into the product, it operates normally. It obtains IP67F (JEM standard) protection structure of enhanced oil proof.

■ Installation and Adjustment

○ For mounting

When using the reflective type photoelectric sensors closely over three units, it may result in malfunction due to mutual interference. When using the through-beam type photoelectric sensors closely over two units, it may result in malfunction due to mutual interference.

When installing the product, tighten the screw with a tightening torque of 0.5 N·m.

○ Optical axis adjustment

● Through-beam type

- Place the emitter and the receiver facing each other and supply the power.
- After adjusting the position of the emitter and the receiver and check their stable indicating range, mount them in the middle of the range.
- After mounting this unit, check the operation of the sensor and lighting of the stability indicator in both status. (none or sensing target status)

※If the sensing target is translucent body or smaller than $\varnothing 15\text{mm}$, it may not sense the target because light is passed.

● Retroreflective type

- Place the sensor and the reflector (or reflective tape) facing each other and supply the power.
- After adjusting the position of the sensor and reflector (or reflective tape) and checking their stable indicating range, mount them in the middle of the range. (none or sensing target status)
- After mounting this unit, check the operation of the sensor and in both status. (none or sensing target status)

※Please use reflective tape (MST Series) for where a reflector is not installed.

● Diffuse reflective type

- Place the emitter and the receiver facing each other and supply the power.
- After adjusting the position of the emitter and the receiver and check their stable indicating range, mount them in the middle of the range.
- After mounting this unit, check the operation of the sensor and lighting of the stability indicator in both status. (none or sensing target status)

○ Operation mode switching

Light ON		Turn the switch all the way to the right (towards L) to select Light ON operation.
Dark ON		Turn the switch all the way to the left (towards D) to select Dark ON operation.

※For through-beam type, the switch is built-in the receiver.

○ Sensitivity adjustment

Order	Sensitivity setting	Descriptions
1		From Light ON status, turn the sensitivity setting adjuster slowly to the right from MIN sensitivity and check the position where operation indicator turns on (A).
2		From Dark ON status, turn the sensitivity setting adjuster further right and check the position where the operation indicator turns on (B). Turn the adjuster left and check the position where the operation indicator turns off (C). ※If the operation indicator does not turn on at MAX sensitivity, the maximum sensitivity setting is set at position (C).
3		Set the adjuster at the center position between (A) and (C) for optimal sensitivity. Also, check if the stability indicator turns off with or without the sensing target. If it does not turn off, please review the operation mode again, as sensitivity may be unstable.

	Light ON	Dark ON
Through-beam type		
Retro-reflective type		
Diffuse reflective type		

※Please set the sensitivity setting adjuster is executed in stable Light ON area and the reliability of environment (temperature, supply, dust etc.) is increased after the mounting it in a stable area.

※When adjusting sensitivity or switching operation modes, please use the Autonics adjustment screwdriver (included accessory). Using a screwdriver with a bigger diameter than the adjuster buttons may cause errors when making adjustments.

※ It may cause breakdown when the sensitivity setting adjuster or the operation mode selection switch is turned by force.

■ Reflectivity by Reflective Tape Model

MST-50-10(50×50mm)	35%
MST-100-5(100×100mm)	45%
MST-200-2(200×200mm)	55%

※This reflectivity is based on the reflector (MS-2S).

※Reflectivity may vary depending on usage environment and installation conditions.

The sensing distance and minimum sensing target size increase as the size of the tape increases.

Please check the reflectivity before using reflective tapes.

※For using reflective tape, installation distance should be min. 20mm.
