

PR Series

Cylindrical type proximity sensor

■ Features

- Improved the noise resistance with dedicated IC (DC 3-wire)
- Reverse power polarity, surge, overcurrent protection
(Except for PR08 Series.)
- Long life cycle and reliable simple operation
- Red LED status indication
- IP67 rated waterproof structure (IEC standard)
- Replacer for micro switches and limit switches

⚠ Please read "Caution for your safety" in operation manual before using.

■ Proper usage

○ Load connections

When using DC or AC 2-wire type proximity sensor, the load must be connected, otherwise internal components may be damaged. And the load can be connected to either wire.

○ In case of the load current is small

● AC 2-wire type

It may cause return failure of load by residual voltage. If the load current is under 5mA, please make sure the residual voltage is less than the return voltage of the load by connecting a bleeder resistor in parallel with the load as shown in the diagram.

$$R = \frac{V_s}{I} (\Omega) \quad P = \frac{V_s^2}{R} (W)$$

[I: Action current of load, R: Bleeder resistance, P: Permissible power]

● DC 2-wire type

Please make the current on proximity sensor smaller than the return current of load by connecting a bleeder resistor in parallel. *W value of Bleeder resistor should be bigger for proper heat dissipation.

$$R = \frac{V_s}{I_o - I_{off}} (\Omega) \quad P = \frac{V_s^2}{R} (W)$$

[V_s : Power supply, I_o : Min. action current of proximity sensor
 I_{off} : Return current of load, P : Number of Bleeder resistance watt]

○ Mutual-interference & Influence by surrounding metals

When several proximity sensors are mounted closely, malfunction of sensor may be caused due to mutual interference. Therefore, be sure to provide a minimum distance between the two sensors, as below charts.

When sensors are mounted on metallic panel, it is required to protect the sensors from being affected by any metallic object except target. Therefore, be sure to provide a minimum distance as below chart.
