

# PS/PSN Series

## Rectangular type proximity sensor

### ■ Features

- Shorten the time of maintenance with the body
- Improved the noise resistance by adopting dedicated IC (DC 3-wire type)
- Reverse power polarity (DC), surge (DC/AC), overcurrent protection (DC type—Except for PS12 Series.)
- Long life cycle and high reliability
- Red LED status indication
- IP67 rated waterproof structure (IEC standard)
- Replacer for micro switches and limit switches

**⚠ Please read "Caution for your safety" in operation manual before using.**

### ■ Specifications

#### ● DC 3-wire type

※ The existing PS17 is upgraded its function and design and changed as PSN17.  
 ※ The case color of PNP output type is changed from orange to gray.

## ■ Proper usage

### ◎ Differential frequency

When installing several proximity sensor closely, it may cause malfunction due to mutual interference. Therefore, please use differential frequency for the application.

※Differential frequency type is only for 17 square.

### ◎ Connection of the power supply

When using DC 2-wire and AC 2-wire type, a load must be connected before applying power; otherwise, components can be damaged.

### ◎ In case of the load current is small

#### ● AC 2-wire type

It may cause return failure of load by residual voltage.

If the load current is under 5mA, please make sure the residual voltage is less than the return voltage of the load by connecting a bleeder resistor in parallel with the load as shown in the diagram.

$$R = \frac{V_s}{I} (\Omega) \quad P = \frac{V_s^2}{R} (W)$$

[ I: Action current of load, R: Bleeder resistance, P: Permissible power ]

#### ● DC 2-wire type

Please make the current on proximity sensor smaller than the return current of load by connecting a Bleeder resistor in parallel.

※W value of Bleeder resistor should be bigger for proper heat dissipation.

$$R = \frac{V_s}{I_o - I_{off}} (\Omega) \quad P = \frac{V_s^2}{R} (W)$$

[ Vs : Power supply, Io : Min. action current of proximity sensor  
Ioff : Return current of load, P : Number of Bleeder resistance watt ]

### ◎ Mutual-interference & Influence by surrounding metals

When several proximity sensors are mounted closely, malfunction of sensor may be caused due to mutual interference. Therefore, be sure to provide a minimum distance between the two sensors, as below.

Unit:mm
